

GreenProtect® Home Fly & Crawling Fly Guide

Fungus Gnats

The larvae cause damage to houseplants as they feed and damage the plant's roots resulting in yellow or stunted growth.

Whitefly

These small sucking insects take the nutrients from the plant and transmit disease.

Aphids

Aphids secrete honeydew which makes the leaves of the plant sticky and potentially covered in black mould.

Green Protect Pot Plant Insect Traps

can be placed inside pots or hang anywhere to help keep your house plants free from insects.

Green Protect Yellow Insect Traps

can be hung anywhere to help keep areas free from flying insects.

Green Protect Window Fly Towers

are eco-friendly, insecticide free monitoring devices.

Fruit Fly

All are associated with rotting fruit and vegetables or fermenting liquids.

Fruit Fly Traps

are designed for use in your home, conservatories, caravans, outdoor rooms and offices.

Fly

Flies are attracted into our homes by a variety of aromas, usually coming from our kitchens and bins.

Green Protect Window Fly Traps

Green Protect Codling Moth Trap

are an effective pheromone trap which helps to prevent codling moth larvae in apples and pears.

Green Protect fly traps, crawling insect traps and repellents are part of our Pest, Disease and Weed Control section. The Green Protect range is perfect for monitoring the levels of crawling and flying insects in your home and garden. They offer an eco-friendly and pesticide-free method of detection and control by using attractants and glues rather than pesticides.

The range of Green Protect insect traps and repellents work to deter or trap creepy crawlies. Regular inspection of traps works to alert you to a potential problem. Early notification allows you to take evasive action and avoid the problem-pest becoming a long-term problem.
